

Course Objectives

This Nationally Accredited course is designed for persons who are required to use breathing apparatus as part of their work.

All persons working in contaminated areas where there is an identified requirement for self-contained breathing apparatus must be trained regularly and comply with relevant national, state or territory legislative requirements and AS/NZS 1715:2009. This course presents a broad range of potential atmospheric space hazards, implementation of safe work procedures, selection, trouble shooting and fault finding, minor maintenance and the correct use of equipment.

The course covers air purifying equipment, fully self-contained, supplied air & escape breathing apparatus.

Successful attendees will be assessed as competent to Operate Breathing Apparatus.

Operate Breathing Apparatus

MSMWHS216

Course Content

- Introduction
- Standards & Legislation
- Definitions
- Human Breathing System
- TOES
- Equipment Selection
- Calculation of Duration
- Roles & Responsibilities
- Hazard Assessment and Control
- Risk Assessment
- Atmosphere Monitoring & Testing
- Practical exercises using SCBA in various scenarios
- Assessment

Who Should Attend?

- Operators
- Supervisors/Managers
- WHS Practitioners
- Contractors
